

Practical 10: Playing Video

Steps: Create “raw” folder in res -> put a video in it (with .mp4 extension) -> then write the following codes

Activity_main.xml

```
<?xml version="1.0" encoding="utf-8"?>
<androidx.constraintlayout.widget.ConstraintLayout
xmlns:android="http://schemas.android.com/apk/res/android"
    xmlns:app="http://schemas.android.com/apk/res-auto"
    xmlns:tools="http://schemas.android.com/tools"
    android:id="@+id/main"
    android:layout_width="match_parent"
    android:layout_height="match_parent"
    tools:context=".MainActivity">

    <LinearLayout
        android:layout_width="409dp"
        android:layout_height="729dp"
        android:orientation="vertical"
        tools:layout_editor_absoluteX="1dp"
        tools:layout_editor_absoluteY="1dp">

        <VideoView
            android:id="@+id/videoView"
            android:layout_width="match_parent"
            android:layout_height="258dp" />

        <Button
            android:id="@+id/button"
            android:layout_width="match_parent"
            android:layout_height="wrap_content"
            android:text="Play Video" />

    </LinearLayout>
</androidx.constraintlayout.widget.ConstraintLayout>
```

MainActivity.java

```
package com.example.test;

import android.net.Uri;
import android.os.Bundle;
import android.util.Log;
import android.view.View;
import android.widget.Button;
import android.widget.MediaController;
import android.widget.VideoView;

import androidx.appcompat.app.AppCompatActivity;

public class MainActivity extends AppCompatActivity {

    VideoView videoView;
    Button btn;

    @Override
    protected void onCreate(Bundle savedInstanceState) {
        super.onCreate(savedInstanceState);
        setContentView(R.layout.activity_main);

        videoView = findViewById(R.id.videoView);
        btn = findViewById(R.id.button); // Ensure button is initialized

        setupVideoView();

        // Set button click listener
        btn.setOnClickListener(this::playVideo);
    }

    private void setupVideoView() {
        MediaController mediaController = new MediaController(this);
        mediaController.setAnchorView(videoView);
        videoView.setMediaController(mediaController);
        videoView.setOnPreparedListener(mp -> mediaController.show(0)); // Force show controls
    }

    public void playVideo(View view) {
        try {
            Uri uri = Uri.parse("android.resource://" + getPackageName() + "/" + R.raw.myvideo);
```

```

        videoView.setVideoURI(uri);
        videoView.requestFocus();
        videoView.setOnPreparedListener(mp -> videoView.start());
    } catch (Exception e) {
        Log.e("Error", "Video playback failed", e);
    }
}
} // Ensure this closing brace is present for the class

```

Output:

Practical 9: Login Example

Create an android application that displays a login form with text for username and password and button for submit and reset. On submitting, toast should be displayed accordingly i.e. “Correct username and password” if username and password match and “Incorrect username/password” if username and password do not match.

(Note: Can change design accordingly.)

Activity_main.xml

```

<?xml version="1.0" encoding="utf-8"?>
<androidx.constraintlayout.widget.ConstraintLayout
    xmlns:android="http://schemas.android.com/apk/res/android"
    xmlns:app="http://schemas.android.com/apk/res-auto"

```

```
xmlns:tools="http://schemas.android.com/tools"
android:id="@+id/main"
android:layout_width="match_parent"
android:layout_height="match_parent"
tools:context=".MainActivity">
```

```
<RelativeLayout
    android:layout_width="409dp"
    android:layout_height="729dp"
    tools:layout_editor_absoluteX="1dp"
    tools:layout_editor_absoluteY="28dp">
```

```
<TextView
    android:id="@+id/LoginExample"
    android:layout_width="wrap_content"
    android:layout_height="wrap_content"
    android:background="#ED0101"
    android:fontFamily="sans-serif-condensed"
    android:text="Login Example"
    android:textAlignment="center"
    android:textColor="#FFFFFF"
    android:textSize="34sp" />
```

```
<EditText
    android:id="@+id/Username"
    android:layout_width="wrap_content"
    android:layout_height="wrap_content"
    android:layout_below="@id/LoginExample"
    android:layout_alignParentStart="true"

Programs related to different Layouts Linear, Relative, Table

- a) Linear Layout (Vertical)
- b) Linear Layout (Horizontal)

Note:

The Same Code is used for both Linear Layout Vertical and Linear Layout Horizontal. Just Change One Word in the below line. Horizontal to Vertical and Vice Versa

android:orientation="horizontal"

Note 2: Make Sure all layouts are wrap_content, like given below

android:layout_width="wrap_content"

android:layout_height="wrap_content"

activity_main.xml

```
<?xml version="1.0" encoding="utf-8"?>
<androidx.constraintlayout.widget.ConstraintLayout
xmlns:android="http://schemas.android.com/apk/res/android"
    xmlns:app="http://schemas.android.com/apk/res-auto"
    xmlns:tools="http://schemas.android.com/tools"
    android:id="@+id/main"
    android:layout_width="match_parent"
    android:layout_height="match_parent"
    tools:context=".MainActivity">

    <LinearLayout
        android:layout_width="409dp"
        android:layout_height="729dp"
        android:orientation="horizontal"
        tools:layout_editor_absoluteX="1dp"
        tools:layout_editor_absoluteY="1dp">

        <EditText
```

```

        android:id="@+id/editTextText"

**Programming Activities and fragments Activity Life Cycle, Activity methods,
Multiple Activities, Life Cycle of fragments and multiple fragments.**

a) Activity Life Cycle

MainActivity.java

```
package com.example.practical3a;
import android.os.Bundle;
import android.util.Log;
import androidx.activity.EdgeToEdge;
import androidx.appcompat.app.AppCompatActivity;

public class MainActivity extends AppCompatActivity {

    String tag= "Android Lifecycle Demonstration";

    @Override
    protected void onCreate(Bundle savedInstanceState) {
        super.onCreate(savedInstanceState);
        EdgeToEdge.enable(this);
        setContentView(R.layout.activity_main);
        Log.d(tag, "In onCreate() Event");

    }
```

```

public void onStart()
{
    super.onStart();
    Log.d(tag, "In onStart() Event");
}

public void onRestart()
{
    super.onRestart();
    Log.d(tag, "In onRestart() Event");
}

public void onPause()
{
    super.onPause();
    Log.d(tag, "In onPause()Event");
}

public void onStop()
{
    super.onStop();
    Log.d(tag, "In onStop() Event");
}

public void onDestroy()
{
    super.onDestroy();
    Log.d(tag, "In onDestroy() Event");
}
}

```

Output:

The screenshot shows the Android Studio interface with the logcat window open. The top bar indicates the device is a Pixel 3a API 35 (emulator-5554) running Android 15, API 35. The package name is 'package:mime'. The logcat shows the following sequence of events:

Time	Process	Thread	Message
2025-03-23 14:01:20.105	9981-9981	Android Li...	com.example.practical3a
2025-03-23 14:01:20.105	9981-9981	Android Li...	com.example.practical3a

Output:

HOW TO PERFORM PRACTICALSSS!!!!!!

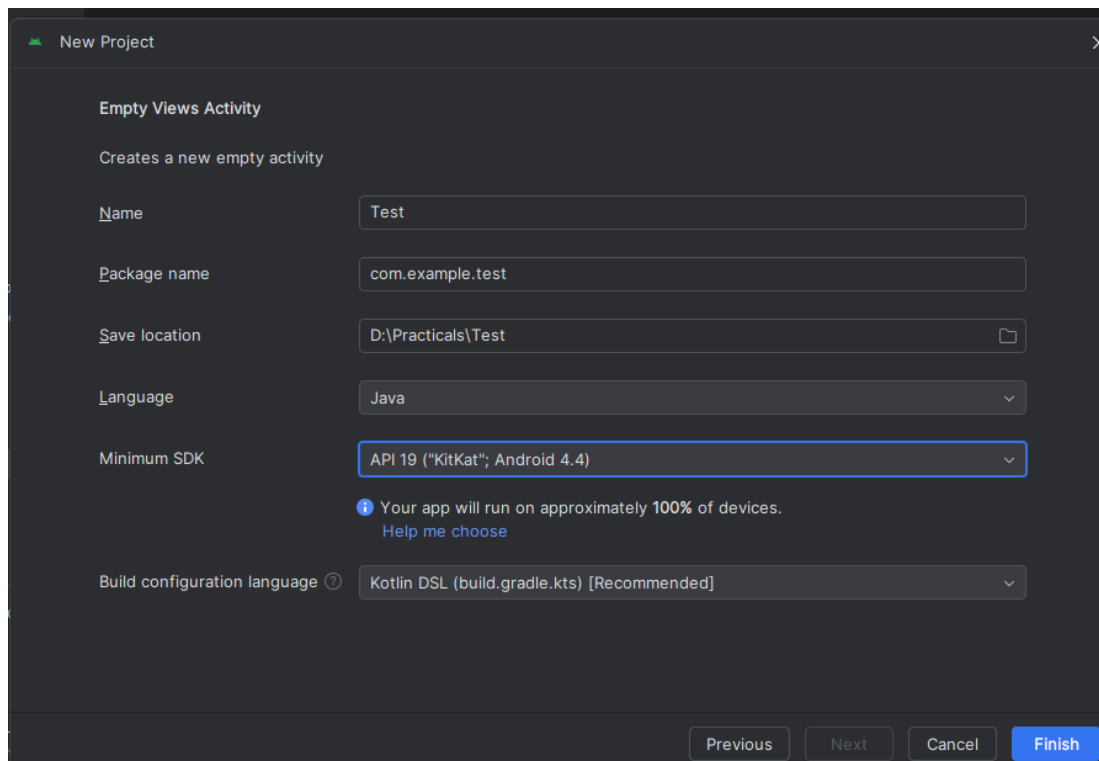

File -> New -> New Project

Select [Empty Views Activity] -> Next

Give Name -> Select Minimum SDK as Kitkat Android 4.4 -> Rest all as it is -> Finish

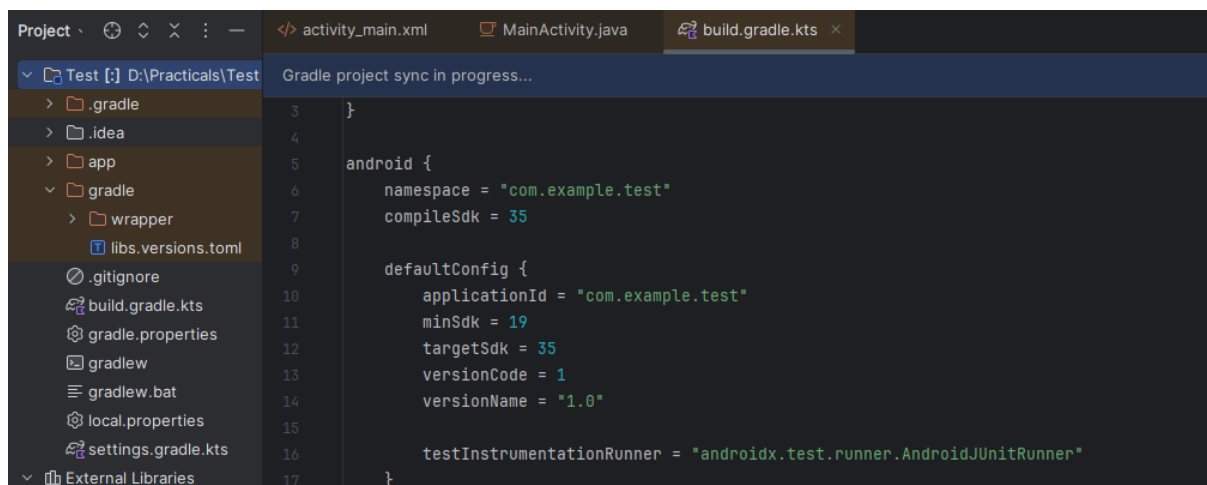

Also Note that:

In build.gradle.kts ->

Change minSdk -> 21

CompileSdk, targetSdk -> 35 (if its not already 35, sometimes it comes as 34 so change to 35)

```
Gradle files have changed since last project sync. A project sync may be necessary for the IDE to work properly. Sync Now Ignore these changes
